HELP PREVENT CHLORINE GAS EXPOSURE

IDENTIFY CHLORINE

If the cloud is no longer visible outside, chlorine may still be present. Use caution when exiting the shelter.

Yellow-green colored gas. Floats near ground and sinks into low points (basements). Sharp smell of bleach.

AVOID EXPOSURE

Cover skin and eyes.

Shelter if inside - Close windows, doors, and turn off any intake fans/ventilation.

Move crosswind if outside. Seek elevation - higher stories of buildings, hills, never go to basement.

FIRST LINE EXPOSURE TREATMENT

Skin – Rinse open wounds, remove clothes if skin is irritated.

Eyes – Rinse with water up to 15 minutes.

Lungs – If not breathing, administer CPR.

Seek professional medical treatment.
